Software engineer with hands-on experience across mobile, augmented reality, and backend systems. I design application architecture, lead small engineering teams, and ship reliable, maintainable products from prototype to release.

EXPERIENCE

Brokerage & REIM · Location-based AR real estate platform · Morocco — Sep 2022 – Aug 2026

Mobile engineer — Nov 2023 – Aug 2026

- Owned the platform's architecture and technical direction, defining how mobile, AR, and backend components communicate.
- Led development of mobile, location-based AR, and backend integrations; set engineering priorities and roadmap.
- Resolved cross-platform iOS and Android reliability issues; managed native builds and tester release pipelines.

Mobile engineer — Sep 2022 – Nov 2023

- Built Dart/Flutter 3.x features using BLoC event-driven state management and MVVM architecture.
- Integrated Firebase Remote Config and Cloud Messaging; resolved platform-specific and performance issues.

Freelance

Mobile engineer · Video Downloader - Video Saver — Jul 2023 – Jul 2025

- Built an Android media downloader in Kotlin and Jetpack Compose, using Koin for dependency injection.
- Implemented automatic video detection, pause/resume downloads, offline playback, and private file storage.
- Integrated Room, Cloud Firestore, Firebase Cloud Messaging, and Crashlytics for storage, notifications, and crash reporting.

Software engineer · Network Reliability Analyzer — Sep 2025 – Jan 2026

- Built reliability block diagram (RBD) databases for curative congestion management models (SPM-SPS, MPM-C).
- Implemented dynamic routing, OSPF connectivity analysis, and Koch's calculations across all outage scenarios in both models.
- Produced RBD visualizations and average-availability plots comparing static and OSPF routing.

Software engineer · Media Processing Service — Jan 2025 – Sep 2025

- Built a service to download media, convert audio, and extract metadata through a REST API.
- Added background job processing, cloud file storage, and caching to reuse previously processed files.
- Delivered live status updates over WebSockets, time-limited download links, and service health checks.

TECHNICAL SKILLS

Languages	Python, Dart, C#, SQL	**Data & storage**	SQLite, Redis, Hive, Amazon S3
Frameworks	Flutter 3.x, BLoC, FastAPI, NetworkX	**Jobs & APIs**	Celery, REST APIs, WebSockets
Architecture	MVVM, event-driven	**Firebase**	Remote Config, Cloud Messaging
Engines & AR	Unity, ARCore	**Tools**	Git, Docker, Sentry

EDUCATION & LANGUAGES

1337 Coding School (42 Network) · Software Engineering Program · Khouribga, Morocco — Nov 2021 – Sep 2022

Languages: Arabic (native) · English, French (professional working proficiency)
